Helion Technology

OVERVIEW DATASHEET - Ultra-Low Resource AES (Rijndael) cores for Xilinx FPGA

Overview

This high performance core from Helion is intended exclusively for use in Xilinx FPGA, and implements the AES (Rijndael) encryption standard, as described in the NIST Federal Information Processing Standard (FIPS) Publication 197 document.

Designed to require the absolute minimum in logic resource, the Tiny AES core from Helion is ideal when silicon area is at a premium, for example in high volume consumer applications. The Tiny AES core comes as part of a long line of AES cores from Helion; being the very first company in the world to offer AES solutions in hardware back in 2001, our cores are now well proven in numerous real products. All our cores are extremely simple to use, and highly versatile; they can be integrated into any AES design requirement with minimum effort.

The Helion Tiny AES core

Functional Description

The Helion Tiny AES core implements the 128-bit block-size NIST FIPS AES algorithm. It was designed to require the absolute minimum of logic resource, whilst still providing full support for both encryption and decryption, plus roundkey expansion for all the AES specified keysizes (128, 192 and 256-bit keys), at data rates up to 75Mbps. In encryption mode, the core accepts a 128-bit plaintext input word, and generates a corresponding 128-bit ciphertext output word using a supplied 128, 192, or 256-bit AES key. In decryption mode, the core provides the reverse function, generating plaintext from supplied ciphertext, using the same AES key as was used for encryption.

The implementation approach taken was to split the 128-bit AES data block into sixteen 8-bit wide elements, and to process each in turn; each AES round then takes multiple master clock cycles to process, and the datapath logic is highly optimal for the algorithm; all the interfaces (plaintext, ciphertext and key) are also a simple 8-bit width.

The interface provided is very straightforward, and will integrate into any existing system with ease. The core interface signal timing has been designed so that the plaintext, ciphertext and AES key ports will talk seamlessly with registers, Xilinx distributed RAMS, Xilinx BlockRams, or FIFOs. Once started, the Helion core handles all of the data and key word access timing without any further user intervention.

Tiny AES core performance and resource requirements

		——— Tiny encryp	— Tiny encryptor/decryptor —	
options	hardware key expansion	hardware key expansion	hardware key expansion	hardware key expansion
	(128-bit key only)	(128-bit key only)	(all key sizes)	(all key sizes)
technology	Xilinx	Xilinx	Xilinx	Xilinx
	Spartan3E –5	Spartan6 –2	Virtex5 –3	Virtex6 –3
typical core logic resource	166 slices	91 slices	97 slices	88 slices
	1 blockram	0 blockram	0 blockram	0 blockrams
max master clock	>146MHz	>141MHz	>376MHz	>399MHz
max data rate 128-bit key-size, ECB mode	>30Mbps	>29Mbps	>78Mbps	>83Mbps

Example performance and logic utilisation figures are shown above, targeting low cost Spartan3E and Spartan6 parts and higher performance Virtex5 and Virtex6 devices. Full support is available for all current and most older Xilinx technologies; we would be pleased to provide details specific to your own applications on request.

About Helion

Helion is a well established British company based in Cambridge, England, offering a range of product-proven Data Security silicon IP cores backed up by our highly experienced and professional design service capabilities. As veteran Xilinx Alliance partners and AllianceCORE members, we take our FPGA solutions extremely seriously; they are not merely retargeted ASIC cores, but handcrafted designs aimed specifically at the technology; the value of this approach can be clearly appreciated by direct comparison with solutions offered by the more broadline IP vendors.

More information

For more detailed information on this or any of our other products and services, please contact Helion and we will be pleased to discuss how we can assist with your individual requirements.
